Daffodils 1945

Explanation of symbols: M means midseason, E early, and EE extra early. The varieties listed below are those in which we specialize. A peck usually contains 50 to 75 bulbs, depending on the size of the bulbs. This year we have a good supply of trim, sturdy shipping crates, holding about 7/8 bushel each. They are ideal shipping containers.

YELLOW WITH LONG TRUMPETS	Per 10	Per peck	Per crate (7/8 bu.)
E King Alfred - Solid, deep yellow -----	\$1.20	\$4.50	\$15.50
M Emperor - Petals lighter than trumpet .85		2.75	9.50
M Olympia - Like Emperor, much larger 1.10		3.50	12.00
EE The First - Bicolor, blooms "the first" 1.10		4.00	13.50
INCOMPARABILIS (Short Trumpets)			
E Sir Watkins - Yellow cup, lighter petals .80		2.25	7.50
EE Helios - Deep yellow, a sturdy flower 1.10		4.00	13.50
HANDMADE MIXTURE - Above six varieties -----		3.75	12.75

SPECIAL COLLECTION OFFER:

15 selected bulbs (doublenose) for \$1.50 postpaid; 3 each of 5 varieties - King Alfred, Emperor, Olympia, Sir Watkins, and Helios. (Substitute The First for one variety if desired.)

50 selected bulbs (doublenose) for \$3.75 postpaid; 10 each of same 5 varieties. (Substitute The First for one variety if desired.)

POSTAGE is NOT PREPAID on PECK offers, but bulbs ordered by count will be sent postpaid to the fourth zone (600 miles) for orders of \$1.00 or more. A peck weighs about 12 lbs. If you live within 150 miles of us, allow 21¢ for postage on a peck. Bulbs may be sent by express collect for one-half the first class express rate. (Usually less than postage.)

WHEN TO PLANT: September in the North, October in the South.

Where and how: Plant with base six or seven inches below surface of ground, in friable soil where moisture is available (but not where water stands). Caution: In spring cut leaves only after they die.

BULBS FOR NATURALIZING. Nearly all varieties of daffodils are good for naturalizing, i. e. planting in grass or in a light woods, without cultivation or digging for a number of years. On the whole small varieties will bloom in this way somewhat longer without overcrowding from multiplication causing the bulbs to dwindle below blooming size. However larger varieties make more of a show for the first few years, and should bloom at least four years even without being dug and separated.

A MIXTURE will lengthen the time of blooming and give variety to the planting. (Our mixtures bloom over a period of three or four weeks with moderate weather conditions.) A planting of all one variety will give a more brilliant effect when in bloom however as the whole patch will be golden at one time. If you buy one peck each of several varieties, you can make a beautiful effect by planting in drifts of different varieties. Our mixtures are mixed by hand at shipping time and all bulbs are healthy and of good blooming sizes.

Helios - Deep yellow, sturdy flower	1.10	1.10	1.10	1.10	1.10
ABOVE SIX VARIETIES - Above six varieties			2.75	2.75	2.75

SPECIAL COLLECTION OFFER

10 selected bulbs (double) for \$1.50 postpaid, 3 each of 3 varieties - King Alfred, Emperor, Clara, Star Marking, and Helios. (Send 10 selected bulbs (double) for \$3.75 postpaid; 10 each of same variety. The first for one variety if desired.)

POSTAGE IS NOT PREPAID ON BULK ORDERS, but bulbs ordered by count will be sent postpaid to the fourth zone (600 miles) for orders of \$1.00 or more. A check weighs about 15 lbs. If you live within 100 miles of us, allow \$1.00 postage on a check. Bulbs may be sent by express collect for one-half the first class express rate. (Usually less than postage.)

WHEN TO PLANT: September in the North, October in the South.

Where and how: Plant with six or seven inches below surface of ground in fertile soil. Water in spring but never after they are in water stands. Caution: In spring cut leaves only after they are in water stands.

WAYS FOR NATURALIZING: Nearly all varieties of daffodils are good for naturalizing, i. e. planting in grass or in a light woods, without cultivation or digging for a number of years. On the whole small varieties will bloom in this way somewhat longer without overcrowding than multi- ligation causing the bulbs to dwindle before blooming size. However, larger varieties make more of a show for the first few years, and should bloom at least four years even without being dug and replanted.

PLANTING: Will lengthen the time of blooming and give variety to the planting. (Our mixtures bloom over a period of three or four weeks with moderate weather conditions.) A planting of all one variety will give a more brilliant effect when in bloom however as the bulbs decay will be golden at one time. If you buy one bush each of several varieties, you can have a beautiful effect by planting in drift of different varieties. Our mixtures are mixed by hand at shipping time and all bulbs are healthy and of good blooming size.

Helios - Colored like King Alfred	\$50.00	\$5.50	12.00	3.25
Sir Watkins - Yellow cup, paler petals			6.50	1.75

MIXED, blooming-size doublenose or singlenose, handmade mixture of above varieties and The First and Sir Watkins 10.50 2.75

Doublenose and other blooming-size bulbs listed above are good, strong bloomers for outdoor planting or for resale to outdoor customers. We do not grow bulbs with the idea of selling them for forcing. However some of our customers write us that they do force some of our stock with good success. We doubt however that many of our doublenose bulbs as listed above are large enough to give more than one bloom in forcing. If you state your preference as to size in ordering by the bushel, we will make every effort to give you the size you prefer. Our average-sized doublenose run around 250 bulbs to the bushel. We will gladly quote prices by the 100 and 1000 on singlenose stock if desired.

-----clip here and use lower section for ordering-----

To help us fill your order satisfactorily, please check:

Above bulbs are to be used for resale ☐ outdoor planting ☐ forcing ☐

I prefer blooming-size doublenose ☐ blooming-size singlenose ☐
